Credits: 3

Grading Method: Regular, Pass-Fail, Audit

Credit only granted for: ANTH411 or ANTH611.

The United Nations estimates that some 230 million people around the world are migrants who live outside their country of birth. This course focuses on these migrant populations, considering the implications of movement across borders and settlement in new societies on their health and well-being. We will investigate the social, political, and economic structures that shape disease and illness and produce differential access to health care for migrants. Within that context, we will explore the health effects of migration itself and particular health conditions from which migrants suffer. We will also examine how migrants interface with differently configured health care systems as well as strategies they and their advocates use to promote health and well-being.

Also offered as: ANTH612. Credit only granted for: ANTH412 or ANTH612.

Using perspectives from medical and urban anthropology, we examine the phenomenon of hypermarginality--the clustering of extreme poverty, chronic disease, addiction, violence and trauma in certain social and spatial contexts, often urban. We will explore both the broader social, political, and economic structures of exclusion that produce hypermarginality, as well as the illness experiences associated with these conditions. As we consider both social suffering and the related institutional responses, we will also discuss the role of anthropological approaches in national discussions about health inequities.

Credits: 3 Grading Method: Regular, Pass-Fail, Audit

Credit only granted for: ANTH411 or ANTH611.

The United Nations estimates that some 230 million people around the world are migrants who live outside their country of birth. This course focuses on these migrant populations, considering the implications of movement across borders and settlement in new societies on their health and well-being. We will investigate the social, political, and economic structures that shape disease and illness and produce differential access to health care for migrants. Within that context, we will explore the health effects of migration itself and particular health conditions from which migrants suffer. We will also examine how migrants interface with differently configured health care systems as well as strategies they and their advocates use to promote health and well-being.

We will explore both the broader social, political, and economic structures of exclusion that produce hypermarginality, as well as the illness experiences associated with these conditions. As we consider both social suffering and the related institutional responses, we will also discuss the role of anthropological approaches in national discussions about health inequities.

Credits: 3 Grading Method: Regular, Pass-Fail, Audit CORE: PS General Education: DSNS, SCIS

Prerequisite: Must have math eligibility of MATH115 or higher; or MATH113.

Have you ever wondered if humans will ever terraform Mars or Europa so we could live there without a spacesuit? Has it ever crossed your mind how lucky you are that you live on a water-rich planet with an oxygen-rich atmosphere? Have you ever suspected novelists and scriptwriters of creating ridiculous planets that violate scientific laws? Does the fate of our planet's thin biosphere keep you up at night? How common is life in the Universe? These are difficult questions, but armed with the right information, you can answer all of them. The Science and Fiction of Planetary Systems will help you develop a deeper understanding of why planets are the way they are. Along the way, you'll see examples of mistakes made in classic science fiction movies, novels and short stories and get the chance to invent your own plausible planets!

CHIN215 **Introduction to Chinese Philosophy**

Credits: 3 Grading Method: Regular General Education: DSHU

Additional information: Course is taught in English. No previous knowledge of Chinese philosophy and history will be assumed and no prerequisites are required.

How should one make moral choices? What is the best way to live a moral life? How should the state be organized to best encourage proper human behavior? And what happens if the state comes to be formed as an empire? What are the proper moral ways to respond? Questions such as these were at the heart of early Chinese philosophical debates (roughly fifth through first centuries BCE). This course will be study of how the early Chinese thinkers wrestled with these questions and what responses they gave. As we will quickly see, the views that arose in early China were among the most powerful and influential in human history. Regardless of whether one agrees with these views or not, they should be studied and taken seriously by anyone who cares about ethics and politics.

ECON175 **Inequality: Determinants and Policy Remedies**

Credits: 3 Grading Method: Regular General Education: DSHS, SCIS

Through most of the 20th century gaps in income between rich and poor declined in the US, but after 1970 we experienced a very rapid increase in inequality. This course challenges students to investigate why people make different amounts of money, why income inequality has risen so dramatically in recent years, what public policy tools exist to counter inequality increases, and what different institutional arrangements different countries use to lower inequality. This course will introduce students to theoretical tools used by economists to understand the sources of inequality and will also examine empirical evidence to better understand changes in the wage distribution and, more generally, in income distribution.

ENEE200 **Social and Ethical Dimensions of Engineering Technology**

Credits: 3 Grading Method: Regular CORE: IE General Education: DSHU, SCIS

What makes a technology socially responsible? At UMD, the Fearless Ideas campaign asks us to aim our enthusiasm for technology at big real problems. At the same time, we are coming to appreciate the increasingly complex nature of technological systems as they become integrated into all forms of infrastructure, we realize they may be unpredictable, interdependent on social and biological systems, and have unintended consequences. In this midst of this complexity, people make decisions with far reaching impacts. How then do we follow our passion for technology and innovation but also stay skeptical in a way that allows us to consider the potential and shortcomings of technology? Designed for both engineering and non-engineering students wishing to explore and assess the impact of engineering technology on society and the role of society in generating that technology.

Credits: 3 Grading Method: Regular

The course will integrate aspects of biochemistry, molecular biology and evolution theory with ecology using pathogens of insects as a model. In this course, students will learn about the various biotic (living) and abiotic (nonliving) factors that can contribute to plant problems, and how to evaluate evidence and distinguish between these factors to arrive at an accurate diagnosis. The course will explore the direction and goals of innovation in microbial biocontrol as well as the effect of social criticism and considerations of environmental impact on attempts to introduce engineered microorganisms. Students will develop an understanding of the coevolutionary games pathogens and their hosts play. To help achieve this objective common themes and important differences in human, plant and insect diseases will be identified; review the physiological and ecological interactions between insects and pathogens and the application of pathogens for biocontrol and develop skills and knowledge required for critical thinking on the potential of using transgenics to improve management strategies for agriculture and the control of insect vectors of human disease. The first step to managing pest and disease problems in plants is an accurate diagnosis.

Prerequisite: BSCI202.

Disease control and prevention is fundamental to the health of local, national, and global populations. Infectious agents are constantly adapting and breaching our defenses. Factors related to society, the environment, and our increasing global interconnectedness increase the likelihood of disease emergence and spread. Vaccines and antibiotics, demographic changes and urbanization, climate change and natural disasters, international travel and commerce, poverty and war create conditions for infectious diseases to spread. So how do we design and execute solutions to public health threats? How do research, policies, interventions, and budgets affect public health systems?

HESP150 **Introduction to Language Science**

Credits: 3	Grading Method: Regular, Pass-Fail, Audit

Language science is the scientific study of how humans acquire, use, comprehend, and produce language. Most people in all societies learn and use their native language or languages with apparent ease - but don't be fooled: languages are highly complex, and speaking and understanding language requires some amazing feats of mental acrobatics. Thus there are many opportunities for difficulties with language, which is the focus of our field. Understanding difficulties with speech, language, and hearing require first understanding how processing works when language is successful - the psychological (behavioral) and neurobiological (brain) factors that enable people to learn and use language despite its intricacies, the structure and properties of language itself, and how knowledge of language is acquired, represented, and processed in the mind and brain.

Credits: 3 | Grading Method: Regular, Pass-Fail, Audit | General Education: DSHS, SCIS

From pirates to body-snatchers, racketeers to smugglers- tales of lawlessness provoke strong reactions, be they delight, fascination or disgust. Yet how often do we seriously assess the meaning and legitimacy of the illicit activities that provide spice to such stores? Ranging from the 1600s to the present and from the Caribbean to Britain, Africa, and Asia the course will focus on specific instances of lawless behavior. Students will explore the motives of those engaged in illicit activity, tease out different understandings of lawlessness, and consider responses to lawless behavior in both past and present. Among the issues addressed will be the influence of legend and reality, the tensions between national sovereignty and international security, debates over human and property rights, and concerns about personal freedom, scientific progress, and community survival.

HLSA484 **Redesigning Health Care: Developing a Clinic to Meet Community Needs**

Credits: 3 Grading Method: Regular

Prerequisite: Must have completed a minimum of 60 credits. Additional information: Approximately half of the course sessions will occur in the school of public health, while two sessions will be on-site at the Mona Clinic in Temple Hills, MD, and the remaining sessions will be taught in the University of Maryland's Academy for Innovation and Entrepreneurship.

Learn a key entrepreneurial skill, Design Thinking, while helping to build, redesign, and transform health care delivery in a new community center and health clinic. The clinic will be a community-based provider of primary care, dental care and wellness services, partially designed by faculty and students, and operated by the Archdiocese of Washington and Catholic Charities in partnership with physicians from local hospitals responsible for local population health. This new, modern vision for a health and wellness clinic embraces student involvement in designing, planning and contributing to innovative programs, solutions, and processes to improve the clinics ability to address the social determinants of health and traditional health care needs. Our constantly changing health care system and environment will put pressure on the clinics services, programs and operations to adapt based on their patients and community stakeholders needs over time, which will allow future students to help fix problems and adapt to the changing health care environment. Students will learn and apply Design Thinking skills to a specific problem, define problems based on stakeholder input, suggest options to reframe and solve the problem, prototype, test, and make recommendations to inform implementation, measurement, and evaluation.

You will then focus on the concept of creativity and learning about the mindsets that are conducive to innovation. Towards the end of the semester, you will focus on the theories and methods related to effective coaching. Throughout the course, you will observe and practice coaching alongside AIE Facilitators as they teach design thinking modules in various courses across campus. Through the study of XV and XVI century courtesy literature, we will explore the various forms of behavior of the rich and powerful of the Italian Renaissance, an era that is much closer to our contemporary world than we might initially think, especially in regard to the way political and influential figures act in social situations and the image of themselves they present to others. What can we learn from observing and comparing the behavior of the rich and powerful of the past and present? In the public arena of these two worlds, does appearance matter more than truth? JAPN221 **Radical Transformations in Japanese Culture**

Credits: 3 Grading Method: Regular General Education: DSHU

Since the early modern period, Japanese cultural forms have reflected the innate instability of contemporary social structures. Focusing on Noh drama, Matsuo Basho's haiku travelogue Oku no hosomichi, popular fiction by Ihara Saikaku, the movement for vernacular literature in the late 19th century, the rise and fall of Marxists and feminists in early 20th century Japan, a variety of perspectives on WWII and its legacy, as well as Japanese pop culture, we will consider the way cultural works developed as part of Japan's radical transformations in the last four centuries. A major film component increases students' direct exposure to the work of Japan's cultural producers, and students' suggestions and interests will help shape the final unit of the course about Japan today. This course is taught in English, and all readings are in English translation.

Landscape ecology emphasizes spatial patterning--its causes, development, and importance for ecological processes. Students will become familiar with concepts, methods, and applications of landscape ecology through reading classic and contemporary literature representative of state-of-the-art research; class lectures; completion of two projects designed to provide "hands on" experience with some of the quantitative methods and tools; and completion of one independent project.

Course covers broad-scale spatial ecological patterns, the processes that generate and maintain them, and the construction of models in R to analyze, simulate, and understand the interplay between pattern, scale, and ecological processes. The objective of the course is to introduce students to ecological theories and concepts relevant to the the study of spatial ecological patterns, while providing the R skills necessary to articulate and answer scientific questions by confronting models with data. The course is focused on hands-on, project-based, student-directed learning and will use lectures, readings, coding assignments, exams, and a final project to teach concepts.

PHYS199M **The Manhattan Project**

Credits: 3	Grading Method: Regular, Pass-Fail, Audit	CORE: PS	General Education: DSHS, DSNS, SCIS

This course explores the development of the atomic bomb during the Manhattan project. Nuclear Physics is introduced in a historical context from the discovery of radioactivity in 1896 to the discovery of nuclear fission in Germany in 1938; this historical approach allows students to understand how scientific knowledge is built up over time.

How can we balance the multiple, and often competing objectives of sustainable agricultural intensification to promote both agricultural productivity and human wellbeing? The answer to this question requires a transdisciplinary, agroecological perspective. Agroecology is the integrative study of the ecology of the entire food system, encompassing ecological, economic and social dimensions. This course is designed to introduce various topics in agroecology (e.g. organic agriculture, biodiversity, the Farm Bill). We will take an ecosystems approach to the study of agriculture that will enable students to analyze the environmental, social, and economic interconnections within various types of agricultural systems locally and globally.

Prerequisite: At least one course in ecology or instructor permission. Recommended: BSCI361 or PLSC471; or any BSCI or ENST ecology course. Additional information: Class will be held on campus, with two day-long field trips to local farms.

How can we balance the multiple, and often competing objectives of sustainable agricultural intensification to promote both agricultural productivity and human wellbeing? The answer to this question requires a transdisciplinary, agroecological perspective. Agroecology is the integrative study of the ecology of the entire food system, encompassing ecological, economic and social dimensions. This course is designed to introduce various topics in agroecology (e.g. organic agriculture, biodiversity, the Farm Bill). We will take an ecosystems approach to the study of agriculture that will enable students to analyze the environmental, social, and economic interconnections within various types of agricultural systems locally and globally. Students will be required to plan and execute group discussions and learning activities.

Credits: 2 Grading Method: Regular, Audit

Credit according to time scheduled and organization of the course. Organized as a lecture series on a specialized advanced topic.

As the Long Term Ecological Research (LTER) Network enters into its 35th year, the opportunity for long-term data to address critical questions that advance general ecological theory and understanding has never been more informed. Course objectives are to identify important, general ecological questions that a) derive from key theories, b) are motivated by the analysis of long-term data, and c) require additional, long-term data collection to be answered by hearing from key ecologists who have been informing ecological theory through their long term research. We will: 1) discuss the importance of long term investigations for enhancing forecasts of future ecological patterns, 2) discuss the essential components of a successful integrated framework for long term core datasets, and 3) outline important general ecological questions and theories that are only tenable through continued long-term data collection and analysis. This will be an online course, with live lectures and discussion during the class meeting time.

This course emphasizes interpreting results, the regression model, and other issues salient to business research, such as handling large datasets. Students will be provided with a simulated dataset that they will use in learning how to frame and answer business questions using the techniques covered in this course. At the conclusion of this course, students will be required to provide an executive-level presentation on the business question, their findings, and resulting implications.

SLLC299P **Special Topics in World Cultures; Behavior of the Rich and Powerful, Past and Present**

Credits: 3 Grading Method: Regular, Pass-Fail, Audit General Education: DSHU

Topic to be announced when course is offered.

Through the study of XV and XVI century courtesy literature, in this course we will explore the various forms of behavior of the rich and powerful of the Italian Renaissance, an era that is much closer to our contemporary world than we might initially think, especially in regard to the way political and influential figures act in social situations and the image of themselves they present to others. What can we learn from observing and comparing the behavior of the rich and powerful of the past and present? In the public arena of these two worlds, does appearance matter more than truth?

An introductory course in qualitative research methods, intended to provide a general overview of the ways sociologists collect qualitative information about social phenomena, focusing on how to collect and anaylyze data that are reliable and applicable to our research questions. We will begin by constructing a research question that will drive our work for the entire semester. You will learn three of the main ways that qualitative data are used in sociological research: analysis of written material, participant observation, and open ended semi-structured interviews.

SURV751 **Introduction to Big Data and Machine Learning**

Credits: 1 Grading Method: Regular, Audit

Prerequisite: Permission of BSOS-Joint Program in Survey Methodology department. Restriction: Permission of BSOS-Joint Program in Survey Methodology department. Additional information: The course is aimed equally at researchers from academia, government and the voluntary and private sector and is appropriate for researchers new to this topic who have some familiarity with survey research concepts such as responsive/tailored survey designs, measurement error, nonresponse bias and data linkage. Familiarity with model building and model selection as well as the R program is not required but could also be helpful. Students without prior knowledge in R should plan on using free online resources to make themselves familiar with the basics of this statistical programming language.

The amount of data generated as a by-product in society is growing fast including data from satellites, sensors, transactions, social media and smartphones, just to name a few. Such data are often referred to as "big data", and can be used to create value in different areas such as health and crime prevention, commerce and fraud detection. Big Data are often used for prediction and classification tasks. Both of which can be tackled with machine learning techniques. In this course we explore how Big Data concepts, processes and methods can be used within the context of Survey Research. Throughout this course we will illustrate key concepts using specific survey research examples including tailored survey designs and nonresponse adjustments and evaluation. This course will offer participants: an overview of key Big Data terminology and concepts, an introduction to common data generating processes, a discussion of some primary issues with linking Big Data with Survey Data, issues of coverage and measurement errors within the Big Data context, a discussion of information extraction and signal detection in the context of Big Data, a discussion of the similarities and differences in model building for inference versus prediction, an overview of general concepts from machine learning as they apply to processing Big Data, a discussion of signal detection and information extraction, a discussion of the potential pitfalls for inference from Big Data, an introduction to a small set of key analytic techniques (e.g. classification trees, random forests, conditional forests) to process Big Data using R with example code provided

Each version of this course focuses on one or several forms of popular culture -- such as TV, music, film, cyber-culture, or genre fiction (for example, science fiction) -- and demonstrates how feminists value, critique and explain such forms. Tools of feminist cultural studies include economic and social analyses of power, race, sexuality, gender, class, nationality, religion, technology, and globalization processes.

Also offered as HIST419I. Credit granted for WMST468L or HIST419I. Following the Russian revolution (1917-1918), Bolshevik leaders articulated the organizing principles of the new Soviet socialist state, among them complete gender equality. Not surprisingly, when the Soviet Union collapsed in 1991 so too did most of its founding principles - including the fiction of gender equality. In Gendering (Post) Socialism we will use film, literature, visual art, and theatre to explore the politics of gender as they developed under Russian socialism and post-socialism.
